

Financial planning using DRS

Our track record speaks for itself. We have consistently delivered world-class solutions improving our clients' business performance and operational effectiveness.

Examining the business holistically, looking at premium incomes and rates, claims, expenses and investment performance, as well as regulatory requirements on solvency, for instance, is becoming all the more important to insurance companies, under ever-increasing pressures from regulators to demonstrate their compliance and capital adequacy.

Meaningful analysis of the historic experience of the business allows for a deeper understanding of exactly what makes the business tick, which areas are a cause for concern, and which need to be modified or addressed so as to ensure the company's continued success.

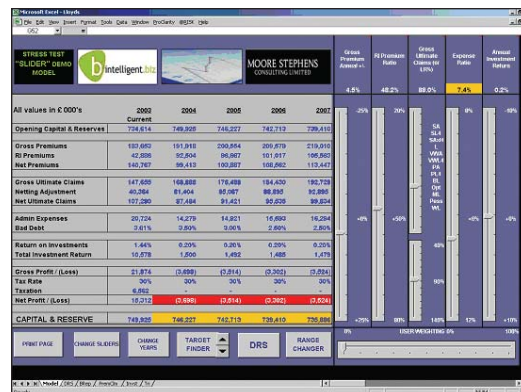

Business analytics

- See instantly real-time information about any aspect of your business
- Flexibly analyse any data in any required way
- Drill down to identify danger areas as well as areas of increasing profitability
- Examine and investigate trends that might otherwise be missed
- Readily see how coming year's profile is changing.

- Compare relative merits and likely profitability of one or more plans:
 - see the chance of remaining profitable five years from now
 - see how increasing rates by 10% will increase the likelihood (or otherwise) of maintaining solvency
 - see how investing assets differently affects the volatility of the overall forecasts.

General

- Greatly enhances insight into the likely future of the business
- Allows supported negotiation with regulators and investors
- See the business and its risks and opportunities as a whole
- Integrates directly with existing Business Intelligence installations
- Ask and answer questions like:
 - what might be the performance of our business as a whole, or in part, over the next year, three years or ten years?
 - how can we best manage our business to mitigate the risks that might threaten it?
 - how can we prove to regulators, capital providers and others that the business is viable?

Dynamic Risk Solutions

- Scientific projection of historic trends and prospective assumptions
- Incorporation of all elements of a business
- Creation of thousands of possible scenarios
- Understanding of interaction and relationship of various components
- Overall statistical analysis of prospective profitability of the business
